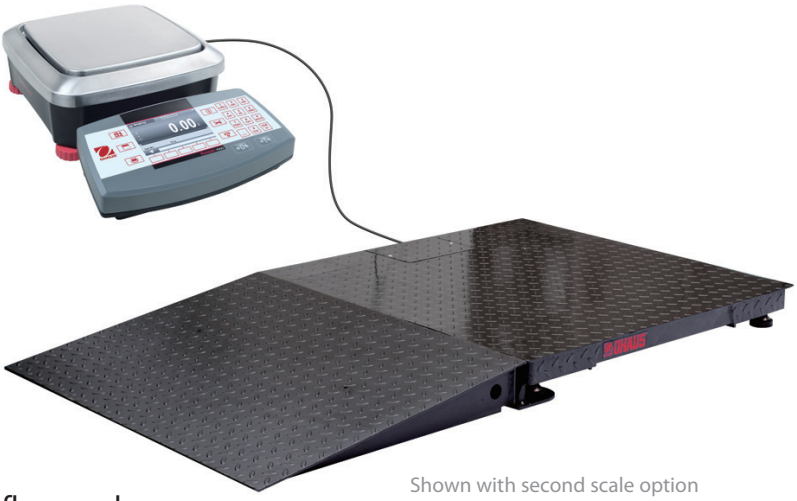
Advanced Features Take Industrial Weighing to the Next Level

With ten advanced application modes, including formulation and density weighing, Ranger 7000 can meet the weighing and measurement needs of practically any industrial application or manufacturing process. Many application modes eliminate the need to do long and complicated manual calculations.

Ranger 7000 contains a 300 item library for storage of weighing, check, counting, and filling data and 30 item library for formulation data, ensuring abundant space for all data storage needs.



Shown with second scale option

With the remote base option, you can connect a floor scale platform or bench scale base with higher capacity in order to achieve precise results for a job of any size. Results from both scales can be displayed at the same time. Ranger 7000 can control many peripheral devices through the optional Discrete I/O interface (provides 2 input ports and 4 output ports), which can be used for accurate weight measurement in filling and checkweighing applications.

Fast Performance and Legal for Trade Certifications Assure Accurate Results

Ranger 7000 standard models have an extremely precise display resolution up to 75,000d (7,500d certified). This incredible resolution can only be outdone by the Ranger 7000 high resolution models which offer a maximum 350,000d (35,000d certified) resolution. R71MHD35 drives extreme precision with 0.1g readability for demanding industrial processing and testing applications where capacity and high resolution precision is the standard.

No matter which version you choose, you can be guaranteed that your results will be available in just one second from the time the load is placed on the platform, improving operator efficiency, productivity, and throughput. This ideal combination of features ensures two of the most important aspects of your weighing results: that they are highly accurate, and delivered quickly.

All Ranger 7000 models meet or exceed the Class II / Class III accuracy requirements in accordance with NIST Handbook 44 and Canada's Weights and Measures Regulations.

Ranger® 7000 Compact Bench Scales

Sturdy Industrial and Modular Design Support Flexible and Heavy-Duty Use

It is a common knowledge that industrial scales are not always delicately handled and Ranger 7000 was built to withstand heavy duty usage. Ranger 7000 has a die-cast sealed metal indicator and housing, ensuring its accurate and long-term operation in even the most demanding industrial environments. The indicator can be separated from the platform and mounted to the wall or bench with the optional mounting kit accessory, allowing you to customize the placement of your scale based on the size and setup of your workstation.

Additionally, a weigh below hook offers the functionality to perform specific gravity tests or weigh items that cannot be easily placed on the weighing platform.

Cutting-Edge SmarText™ 2.0 Software Powers the Technologically Advanced Ranger 7000

The SmarText 2.0 interface will have you easily using the Ranger 7000 for all of its unique and advanced features quickly. SmartText 2.0 makes an advanced scale very simple to use, and will greatly reduce training time for operators. It is also simple to set up and can be configured with just a few button presses.

Ranger 7000 has a bright backlit display and navigation panel that is comprised of a keypad with 5 quick, 8 function, and 12 alphanumeric keys and a 4.3 inch graphic display, which can be operated in multiple languages.

Standard Connectivity with Flexible Options

The data produced by Ranger 7000 can be easily exported through the standard RS232 or USB device port. Additional connectivity options include a second RS232 or Ethernet, and standard USB host port for bar code scanner or flash drive. Through the RS232/USB/Ethernet and barcode scanner, a complete inventory control system can be set up through a single scale, considerably reducing the investment associated with more complex systems. With full GLP/GMP data output, Ranger 7000 can help meet traceability and compliance requirements.

Advanced Application Modes

Weighing
Determine the weight of items in the selected unit of measure.
*A statistics feature can be used in conjunction with weighing mode in order to compare the relative deviation of a number of samples and other statistical data.

Density Determination
Determine density of solids. With the weigh below hook, it's possible to perform specific gravity tests for objects that cannot be easily placed on the weighing pan.

Filling
Fill a container to a target weight. Progress bar displays filling status. Connect with Discrete I/O option kit for auto-filling system.

Differential Weighing
Calculate the difference between sample weights and initial weights.

Parts Counting
Count samples of uniform weight. Advanced auto-optimization software recalculates the average piece weight as the overall weight increases.

Dynamic Weighing
Weigh an unstable load. Scale takes an average of weights over a period of time.
*A Display Hold feature manually or automatically holds the last stable weight on the display. (Activated by setting time interval of Dynamic Weighing to zero.).

Formulation
For compounding and recipe making. Available "compensation mode" which enables recalculation in case component added is outside the tolerance.

Check Weighing/Counting
Compare the weight/count of a sample against target limits. Connect with Discrete I/O option kit for external check lights.

Percent Weighing
Measure the weight of a sample displayed as a percentage of a pre-established Reference Weight.
